Main.sh

Menu Structure

```
┌──────────────────────────────────┐
│     === USER MENU ===            │
│                                  │
│ 1. View Project Structure        │
│ 2. File Management               │
│ 3. Compression & Search          │
│ 4. Create/Reset Structure        │ ← Admin only
│ 5. Permissions & Links           │ ← Admin only
│ 6. Exit                          │
└──────────────────────────────────┘
```

- Acts as a gateway by welcoming and authenticating users.
- Serves as a control center by displaying a menu and directing user selections to the correct modules.
- Integrates modules by loading other specialized scripts as needed to perform different tasks.

Outputs of the main project program.

create_files_dir.sh

- Option 4 is the "Create/Reset Structure" functionality that generates a complete e-commerce file system with realistic data. It's the foundation builder of the TechUIDE system.

Property	Value
File Name	`create_files_dirs.sh`
Size	4.7KB
Lines of Code	201
Purpose	E-commerce File Structure Generator
Access Level	Admin Only

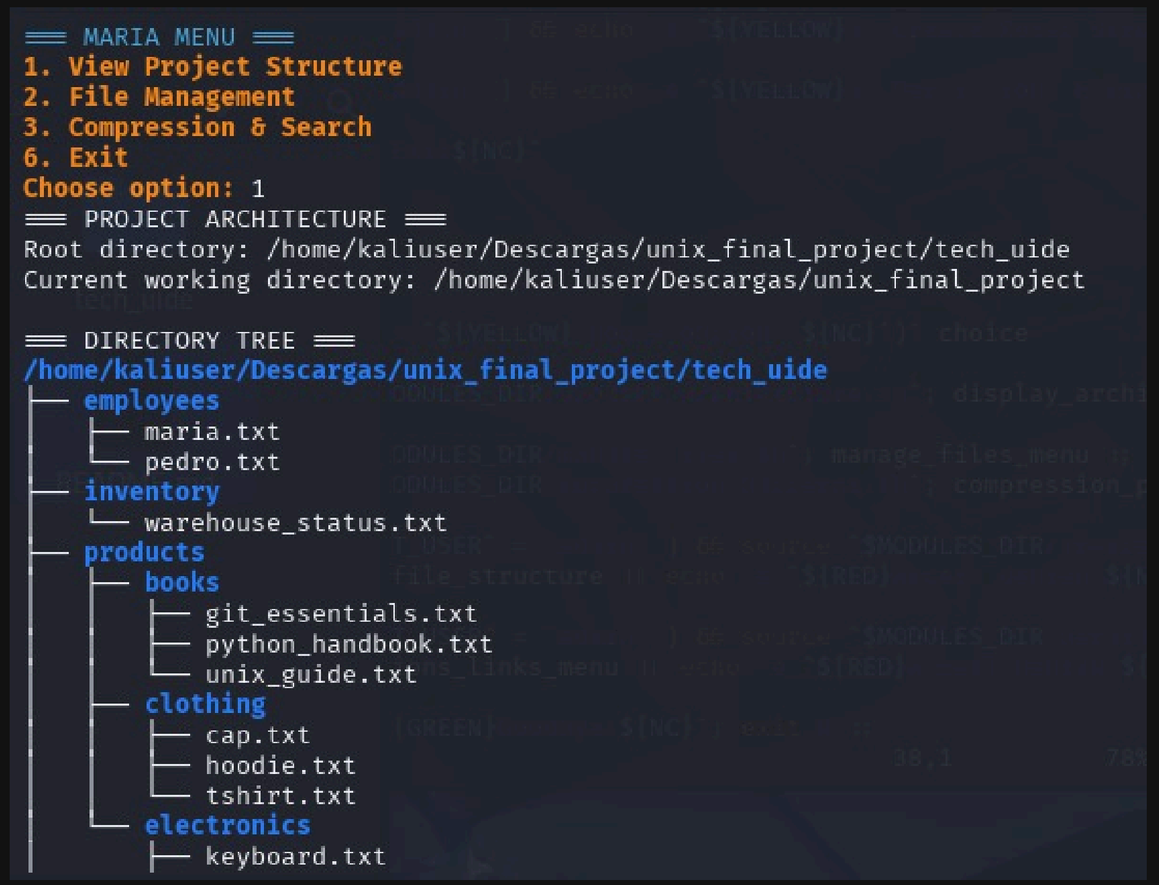
View Project Structure

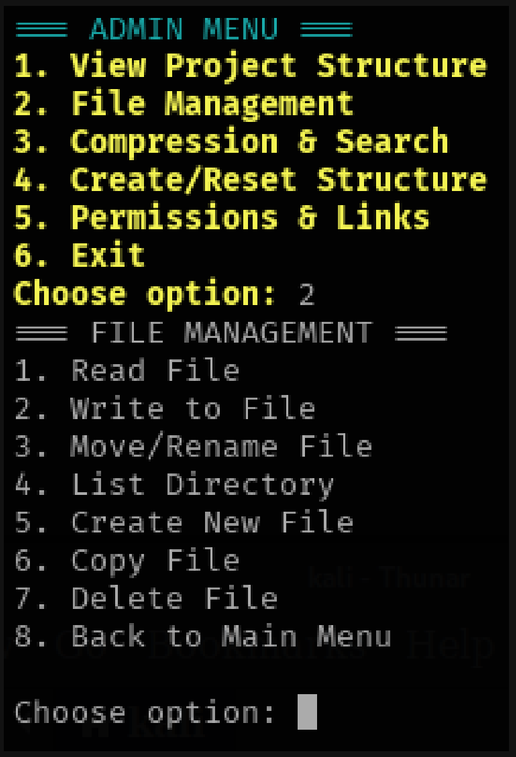
- Option 1 is the "View Project Structure" functionality that generates the complete structure of the system with its directories and folders. Structure of the TechUIDE system.



File Management

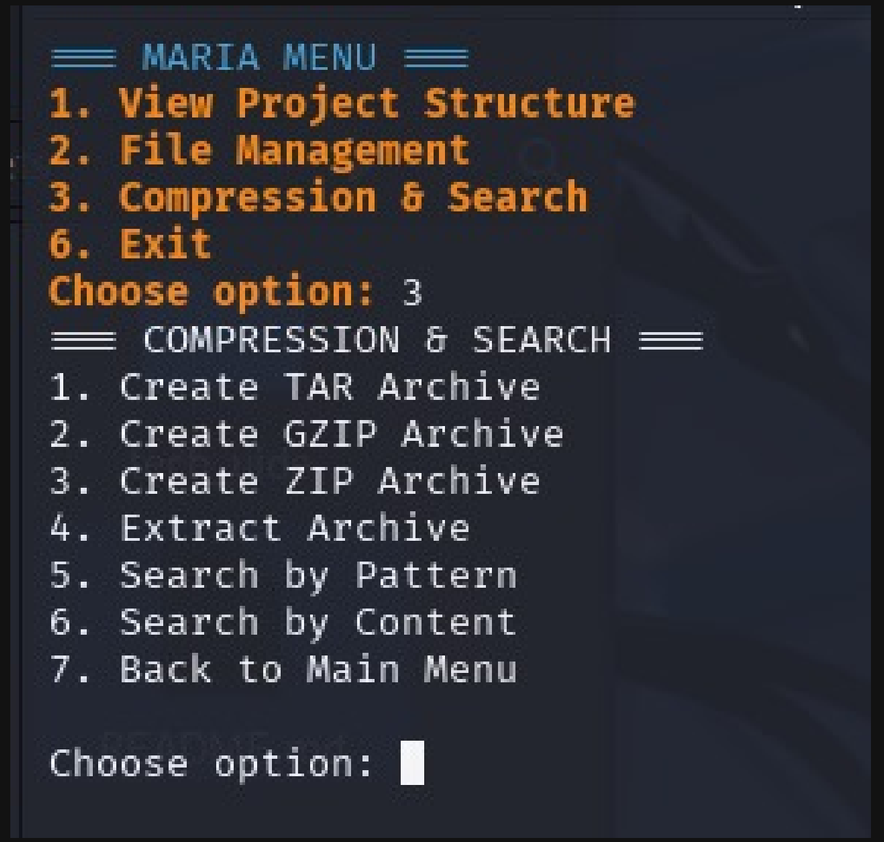
- Option 2 is the "File Management"

The File Management module provides essential tools for handling files and directories within the tech_uide system. It allows users to create, delete, move, and rename files or folders, helping simulate common administrative tasks in a UNIX environment. The module also supports interactive navigation through directory structures to perform operations easily. It enhances the user experience by offering practical file handling in a structured, menu-driven format..



Compression and Search

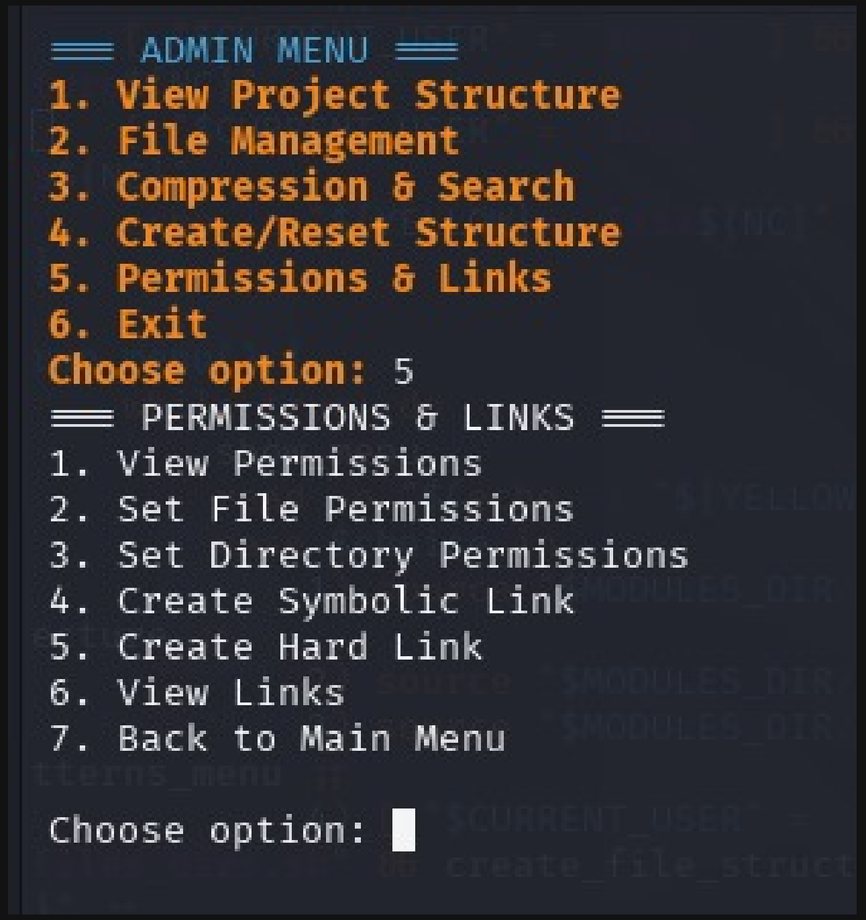
- Option 3 is the "Compression and Search" functionality that generates menu with multiples options of compress and search. Compression and search of the TechUIDE system.



Permissions and Links

- Option 5 This is the “Permissions and Links” feature.

It generates a menu with multiple permissions and links options for viewing and creating permissions and links in the TechUIDE system.

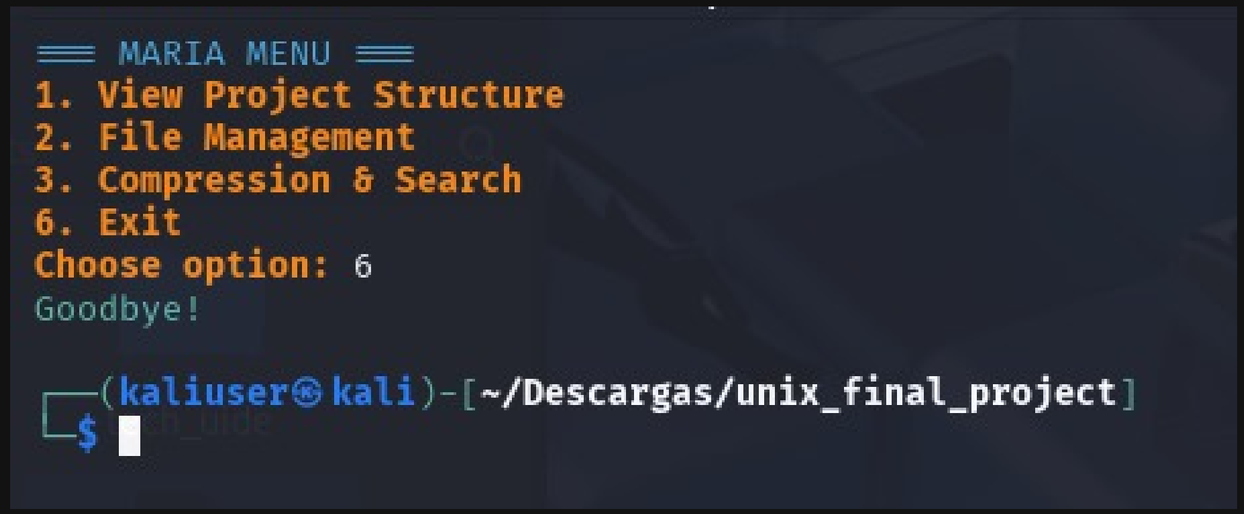


Exit

- Option 6 This is the “Exit” function.

It generates the maria (employee) system exit.

Exit in the TechUIDE system.



Thank you
